

NATIONAL SCIENCE WEEK

This year the theme of British Science Week was 'Change and Adapt' and children across the school took part in a range of activities exploring these themes. We took part in sustainable farming workshops, built wormeries, made models to simulate the melting of glaciers, investigated how to change the pitch of sounds, created animals that were adapted to different habitats, looked at how coins have changed over the years, considered how to make playground games more inclusive, observed how different types of sugar dissolve and explored the environmental impact of flushing different materials.

Bairravi 2H 'We used water to make high and low sounds - I love science week!'

Frazier 5B 'It's really fun doing different experiments and activities'

Katrin 6M 'It's fun, like experiments investigating whether to flush different materials.'
