

Digestive System

Key Vocabulary

digest	Break down food so it can be used by the body.
oesophagus	A muscular tube which moves food from the mouth to the stomach.
stomach	An organ in the digestive system where food is broken down with stomach acid and by being churned around.
small intestine	Part of the intestine where nutrients are absorbed into the body.
large intestine	Part of the intestine where water is absorbed from remaining waste food. Faeces are formed in the large intestine.
rectum	Part of the digestive system where faeces are stored before leaving the body through the anus.
teeth	Hard structures in the mouth that help with biting and chewing food.

Key Knowledge

The Digestive System

What I already know -

- I know that we have different types of teeth.
- I can locate parts of the human body and know what some parts of the body do.
- I can highlight different ways that humans can be healthy.
- I know that humans have to eat to gain energy.

What I will know by the end of this module -

- Understand the process and body parts involved in digestive system.
- Understand the different teeth humans have and their structure.
- Understand how to keep teeth healthy.
- Be able to highlight different teeth and their functions.
- Understand how different drinks can affect our teeth.
- Describe the functions of the digestive system.

Human Teeth and Their Functions

Some people have wisdom teeth but they have no function now.

To help prevent tooth decay:

- limit sugary food and drink;
- brush teeth at least twice daily using a fluoride toothpaste;
- spit toothpaste out (rather than rinsing) after brushing your teeth because rinsing can stop the fluoride in the toothpaste from working as well;
- visit your dentist regularly.
